

Lab 4 Report

Name 盧家馨

Student ID 106598005

Date 2018/05/22

1 Test Plan

1.1 Summary

The system to be tested for this lab is Socify, an online social networking platform for allowing users to exchange messages, keep track of events, and share photos. Particularly, it helps users to get to know each other.

This lab is to test some features of Socify. In the lab, I will develop test requirements for the features of Socify to be tested. I also required to design test cases to verify the test requirements.

1.2 Features to be tested

- **Create a new event**
 - Edit event
 - Delete event
- **Post comment**
 - Write/delete/edit a comment in response to friend's posts (i.e., comments)
 - Press Like Button and Unlike Button at this comment
- **Create a new status**
 - Add images
 - Delete/Edit a status
- **Follow friends**
- **Find friends**
- **Edit profile**
 - Upload avatar and cover
 - Edit all info of profile

1.3 Success criteria of completing the test

Bugs will be rated according to their severity. The feature of lab4 has the following severity classes:

- Minor
- Normal
- Serious

Priority	Requirement
High	Average less than 2 unresolved bugs with severity Minor /module. Not over 5 unresolved bugs/module.
Medium	Same as above, but can contain less than average 1 unresolved bugs of severity Normal /module.
Low	No unresolved bugs with severity Serious . Not more than 5 unresolved bugs/module.

1.4 Test environment and infrastructure

- Hardware: 1 PC
- Software: Chrome, Selenium IDE
- Test Data: Socify website and test data of my use.

1.5 Test approaches

This lab use “user scenarios” and “ISP” to design test case, and measure test coverage if there are enough free time. This lab use Selenium IDE as the test tools, and use multiple testing technique to ensure that all the test requirements can be satisfied and the goals of the test can be achieved.

1.6 Testing tasks

To implement the proposed strategy, the following activities are planned to perform.

No.	Activity Name	Plan hours	Schedule Date
1	Study Selenium IDE	2	2018/05/18
2	Learn and use Socify	2	2018/05/18
3	Design test cases for the features	4	2018/5/19
4	Implement test cases	4	2018/5/19
5	Perform test	3	2018/5/21
6	Complete Lab4 report	3	2018/5/22

2 Test Design

Feature : Create a new Event	
User scenario	1. User click button of create new event 2. User type the new event 3. User click to send event
Precondition	User login
Postcondition	User create new event
Exception	If User don't type anything, then the event won't successful create.

Feature : Edit event	
User scenario	1. User click button of edit event 2. User type the new event 3. User click to send event
Precondition	The event that user already created.
Postcondition	User update event successfully
Exception	If User don't type anything, then the event won't successful edit.

Feature : Delete event	
User scenario	User click button of delete event
Precondition	The event that user already created.
Postcondition	User update event successfully
Exception	None

Feature : Write a comment in response to friend's posts	
User scenario	1. User click the button of comment in friend's event. 2. Type the message 3. User click to send event
Precondition	The event that user's friend already created.
Postcondition	User leave message successfully.
Exception	If User don't type anything, then the message won't successful replay.

Feature : Delete a comment in response to friend's posts	
User scenario	User click the button of delete in friend's event.
Precondition	The message that user already send in friend's event
Postcondition	User delete message successfully.
Exception	None

Feature : Press Like Button at this comment	
User scenario	User click the button of like in friend's event.
Precondition	The event that user's friend already created.
Postcondition	Add the number of like in friend's event
Exception	None

Feature : Press Unlike Button at this comment	
User scenario	User click the button of like in friend's event.
Precondition	The event that user already press like button.
Postcondition	Reduce the number of like in friend's event
Exception	None

Feature : Create a new status	
User scenario	<ol style="list-style-type: none"> 1. User input the comment and upload picture in a new status. 2. User click button of send
Precondition	User login
Postcondition	User create new status successfully
Exception	There will show error message if there is no comment in status.

Feature : Edit status	
User scenario	<ol style="list-style-type: none"> 4. User click button of edit status 5. User type the new status or upload the new picture 6. User click to send status
Precondition	The status that user already created.
Postcondition	User update status successfully

Exception	If User don't type anything, then the status won't successful update.
-----------	---

Feature : Delete status	
User scenario	User click button of delete status.
Precondition	The status that user already created.
Postcondition	User delete status successfully
Exception	None

Feature : Follow friends	
User scenario	1. User click button of "Find friends" 2. Click the button of Follow in which friend you want to follow.
Precondition	User login
Postcondition	User follow a friend successfully.
Exception	None

Feature : Upload avatar and cover	
User scenario	1. User click button of "Edit Profile" 2. User upload Avatar and Cover. 3. User click update.
Precondition	User login
Postcondition	User upload Avatar and Cover successfully.
Exception	None

Feature : Edit all info of profile	
User scenario	1. User click button of "Edit Profile" 2. User input the new information in the certain column 3. User click Update
Precondition	User login
Postcondition	User upload profile successfully.
Exception	Error occurred when user doesn't type user name.

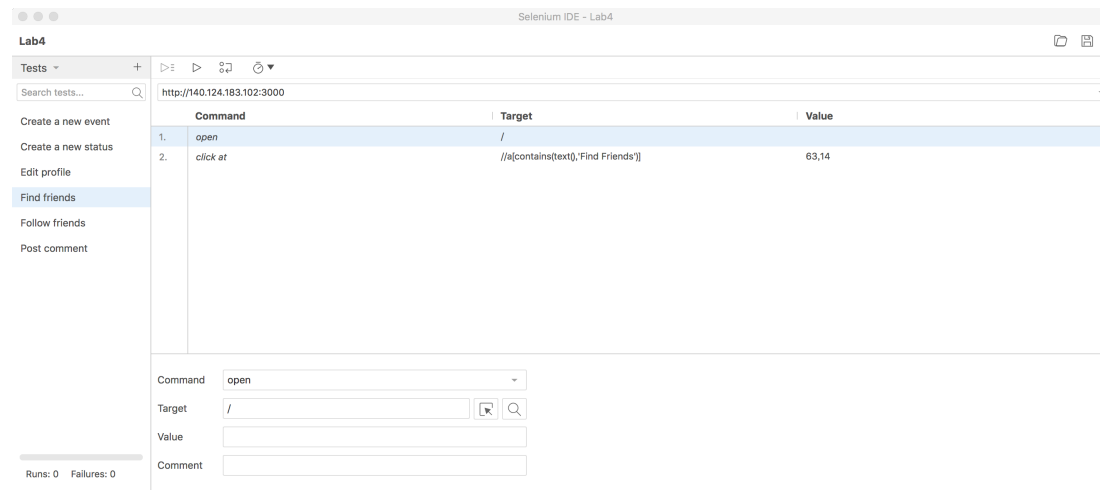

Because of the restrict in Selenium IDE. There are two test case failure, because both cases need to upload photo from local, it is about security and not in this test purpose.

3 Test Implementation

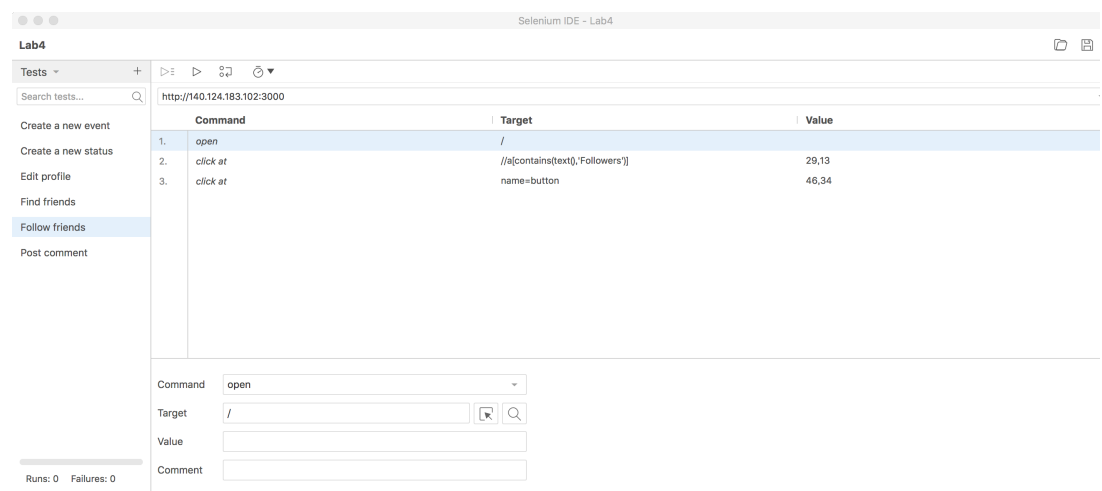

There are all feature test case in the following:

No.	Test features	Test Flow																																				
1	Create a new event	 <table border="1"> <thead> <tr> <th>Command</th><th>Target</th><th>Value</th></tr> </thead> <tbody> <tr><td>1. open</td><td>/</td><td></td></tr> <tr><td>2. click at</td><td>id=post-content</td><td>303,41</td></tr> <tr><td>3. edit content</td><td>id=post-content</td><td>This is for test!</td></tr> <tr><td>4. click at</td><td>name=commit</td><td>41,21</td></tr> <tr><td>5. click at</td><td>//div[@id='post-798']/div[2]/div[2]/div/a</td><td>11,14</td></tr> <tr><td>6. click at</td><td>id=post-content</td><td>235,4</td></tr> <tr><td>7. click at</td><td>id=post-content</td><td>103,15</td></tr> <tr><td>8. edit content</td><td>id=post-content</td><td>This is for test edit!</td></tr> <tr><td>9. click at</td><td>name=commit</td><td>30,24</td></tr> <tr><td>10. click at</td><td>css=i.fa.fa-trash</td><td>5,10</td></tr> </tbody> </table>	Command	Target	Value	1. open	/		2. click at	id=post-content	303,41	3. edit content	id=post-content	This is for test!	4. click at	name=commit	41,21	5. click at	//div[@id='post-798']/div[2]/div[2]/div/a	11,14	6. click at	id=post-content	235,4	7. click at	id=post-content	103,15	8. edit content	id=post-content	This is for test edit!	9. click at	name=commit	30,24	10. click at	css=i.fa.fa-trash	5,10			
Command	Target	Value																																				
1. open	/																																					
2. click at	id=post-content	303,41																																				
3. edit content	id=post-content	This is for test!																																				
4. click at	name=commit	41,21																																				
5. click at	//div[@id='post-798']/div[2]/div[2]/div/a	11,14																																				
6. click at	id=post-content	235,4																																				
7. click at	id=post-content	103,15																																				
8. edit content	id=post-content	This is for test edit!																																				
9. click at	name=commit	30,24																																				
10. click at	css=i.fa.fa-trash	5,10																																				
2	Create a new status	 <table border="1"> <thead> <tr> <th>Command</th><th>Target</th><th>Value</th></tr> </thead> <tbody> <tr><td>1. click at</td><td>id=post-content</td><td>375,41</td></tr> <tr><td>2. edit content</td><td>id=post-content</td><td>test</td></tr> <tr><td>3. click at</td><td>id=post-attachment</td><td>36,22</td></tr> <tr><td>4. type</td><td>id=post_attachment</td><td>C:\fakepath\fullsizeoutput_2e5.jpeg</td></tr> <tr><td>5. click at</td><td>name=commit</td><td>36,28</td></tr> <tr><td>6. click at</td><td>//div[@id='post-806']/div[2]/div[3]/div/a</td><td>26,10</td></tr> <tr><td>7. click at</td><td>id=post-content</td><td>356,44</td></tr> <tr><td>8. edit content</td><td>id=post-content</td><td>test modify!</td></tr> <tr><td>9. click at</td><td>name=commit</td><td>44,21</td></tr> <tr><td>10. click at</td><td>//div[@id='post-806']/div[2]/div[2]/div[3]/div/a[2]</td><td>25,17</td></tr> <tr><td>11. open</td><td>/</td><td></td></tr> </tbody> </table>	Command	Target	Value	1. click at	id=post-content	375,41	2. edit content	id=post-content	test	3. click at	id=post-attachment	36,22	4. type	id=post_attachment	C:\fakepath\fullsizeoutput_2e5.jpeg	5. click at	name=commit	36,28	6. click at	//div[@id='post-806']/div[2]/div[3]/div/a	26,10	7. click at	id=post-content	356,44	8. edit content	id=post-content	test modify!	9. click at	name=commit	44,21	10. click at	//div[@id='post-806']/div[2]/div[2]/div[3]/div/a[2]	25,17	11. open	/	
Command	Target	Value																																				
1. click at	id=post-content	375,41																																				
2. edit content	id=post-content	test																																				
3. click at	id=post-attachment	36,22																																				
4. type	id=post_attachment	C:\fakepath\fullsizeoutput_2e5.jpeg																																				
5. click at	name=commit	36,28																																				
6. click at	//div[@id='post-806']/div[2]/div[3]/div/a	26,10																																				
7. click at	id=post-content	356,44																																				
8. edit content	id=post-content	test modify!																																				
9. click at	name=commit	44,21																																				
10. click at	//div[@id='post-806']/div[2]/div[2]/div[3]/div/a[2]	25,17																																				
11. open	/																																					
3	Post comment	 <table border="1"> <thead> <tr> <th>Command</th><th>Target</th><th>Value</th></tr> </thead> <tbody> <tr><td>1. open</td><td>/</td><td></td></tr> <tr><td>2. click at</td><td>css=#post-739 > div.actions > div.row > div.col-xs-6.comment > a.btn.btn-block</td><td>111,24</td></tr> <tr><td>3. click at</td><td>id=comment-text</td><td>259,61</td></tr> <tr><td>4. edit content</td><td>id=comment-text</td><td>This is for test!</td></tr> <tr><td>5. click at</td><td>name=commit</td><td>73,39</td></tr> <tr><td>6. click at</td><td>css=i.fa.fa-trash</td><td>4,8</td></tr> <tr><td>7. click at</td><td>name=button</td><td>228,24</td></tr> <tr><td>8. click at</td><td>name=button</td><td>175,27</td></tr> </tbody> </table>	Command	Target	Value	1. open	/		2. click at	css=#post-739 > div.actions > div.row > div.col-xs-6.comment > a.btn.btn-block	111,24	3. click at	id=comment-text	259,61	4. edit content	id=comment-text	This is for test!	5. click at	name=commit	73,39	6. click at	css=i.fa.fa-trash	4,8	7. click at	name=button	228,24	8. click at	name=button	175,27									
Command	Target	Value																																				
1. open	/																																					
2. click at	css=#post-739 > div.actions > div.row > div.col-xs-6.comment > a.btn.btn-block	111,24																																				
3. click at	id=comment-text	259,61																																				
4. edit content	id=comment-text	This is for test!																																				
5. click at	name=commit	73,39																																				
6. click at	css=i.fa.fa-trash	4,8																																				
7. click at	name=button	228,24																																				
8. click at	name=button	175,27																																				
	Edit profile	 <table border="1"> <thead> <tr> <th>Command</th><th>Target</th><th>Value</th></tr> </thead> <tbody> <tr><td>1. open</td><td>/find_friends</td><td></td></tr> <tr><td>2. click at</td><td>xpath=//a[contains(text(),'Edit Profile')][2]</td><td>40,7</td></tr> <tr><td>3. click at</td><td>id=user_avatar</td><td>37,13</td></tr> <tr><td>4. type</td><td>id=user_avatar</td><td>C:\fakepath\IMG_2824.JPG</td></tr> <tr><td>5. click at</td><td>id=user_cover</td><td>19,16</td></tr> <tr><td>6. type</td><td>id=user_cover</td><td>C:\fakepath\qtWZaKYjS8CVGOGqfdMq7Q.jpg</td></tr> <tr><td>7. click at</td><td>id=user_name</td><td>190,22</td></tr> <tr><td>8. type</td><td>id=user_name</td><td>Jessie Lu</td></tr> <tr><td>9. click at</td><td>id=user_about</td><td>166,22</td></tr> <tr><td>10. type</td><td>id=user_about</td><td>WIRL</td></tr> <tr><td>11. click at</td><td>id=user_location</td><td>85,24</td></tr> </tbody> </table>	Command	Target	Value	1. open	/find_friends		2. click at	xpath=//a[contains(text(),'Edit Profile')][2]	40,7	3. click at	id=user_avatar	37,13	4. type	id=user_avatar	C:\fakepath\IMG_2824.JPG	5. click at	id=user_cover	19,16	6. type	id=user_cover	C:\fakepath\qtWZaKYjS8CVGOGqfdMq7Q.jpg	7. click at	id=user_name	190,22	8. type	id=user_name	Jessie Lu	9. click at	id=user_about	166,22	10. type	id=user_about	WIRL	11. click at	id=user_location	85,24
Command	Target	Value																																				
1. open	/find_friends																																					
2. click at	xpath=//a[contains(text(),'Edit Profile')][2]	40,7																																				
3. click at	id=user_avatar	37,13																																				
4. type	id=user_avatar	C:\fakepath\IMG_2824.JPG																																				
5. click at	id=user_cover	19,16																																				
6. type	id=user_cover	C:\fakepath\qtWZaKYjS8CVGOGqfdMq7Q.jpg																																				
7. click at	id=user_name	190,22																																				
8. type	id=user_name	Jessie Lu																																				
9. click at	id=user_about	166,22																																				
10. type	id=user_about	WIRL																																				
11. click at	id=user_location	85,24																																				

Find friends

Follow friends

I use ISP test technique in every input area (the biggest, longest, negative, etc.), but I found out that Selenium IDE can't show the error message about the ISP. For example, I upload profile and type 2018-13-30, this is the correct month which can't be found in the calendar, but there is no any error message. So this is the shortcomings that I found in this lab.

4 Test Results

4.1 Selenium IDE test result snapshot

The screenshot displays the Selenium IDE interface for a test suite named 'Lab4'. The interface includes a sidebar with navigation options like 'Create a new event*', 'Create a new status', 'Edit profile', 'Find friends', 'Follow friends', and 'Post comment'. The main area shows a table of test steps:

	Command	Target	Value
1.	open	/	
2.	click at	id=post-content	303,41
3.	edit content	id=post-content	This is for test!
4.	click at	name=commit	41,21
5.	click at	//div[@id="post-827"]/div[2]/div[2]/div/a	11,14
6.	click at	id=post-content	235,4
7.	click at	id=post-content	103,15
8.	edit content	id=post-content	This is for test edit!
9.	click at	name=commit	30,24
10.	click at	css=.fa.fa-trash	5,10

Below the table, there is a form to define a new step with fields for Command (click at), Target (//div[@id="post-827"]/div[2]/div[2]/div/a), Value (11,14), and Comment.

The Log section at the bottom shows the execution results for each step, all marked as 'Success'.

```
4. Trying to execute clickAt on name=commit with value 41,21... Success
5. Trying to execute clickAt on //div[@id="post-827"]/div[2]/div[2]/div/a with value 11,14... Success
6. Trying to execute clickAt on id=post-content with value 235,4... Success
7. Trying to execute clickAt on id=post-content with value 103,15... Success
8. Trying to execute editContent on id=post-content with value This is for test edit!... Success
9. Trying to execute clickAt on name=commit with value 30,24... Success
10. Trying to execute clickAt on css=.fa.fa-trash with value 5,10... Success
*Create a new event* completed successfully
```

5 Learning

In this lab4, different from the lab before finished, which use the “user scenarios” and “ISP” testing technique to fulfill test case, and this lab is black-box test without knowing the source code and any functions to cooperate with each other. I learn a lot of experience from this time because this test tool(Selenium IDE) is very unfamiliar with me.
